

Media Destruction

Do you destroy Hard Drives

YES.

Your Hard Drive is full of Confidential information, it has become a target for identity theft. When Business and Charity organizations upgrade their computers, they often forget to destroy the data on the hard drives. This can be a high exposure risk to both company and its clients.

Some programs erase the data, some just delete the files and directories on the drive and the actual data remains. Simply by using other available software, the information can be restored, giving someone access to confidential information believed to be destroyed. This leaves organizations vulnerable to lawsuits and being on wrong side of the law. If you are run a medical business keep in mind that [HIPAA](#) regulations require the [shredding](#) of all discarded medical documents including CDs and DVDs. You might also look at industrial shredders (high security) that retain the inner hub serial number so you can verify destruction of the media. If you use a service to destroy the data make sure they provide you an audit report, a certificate of destruction, and waiver of liability.

You should know that Erasing your hard drive doesn't mean the data is purged. Our [Hard drive destruction](#) is proven to be the only 100% secure way to [destroy data](#) from hard drives permanently. That means **physically shredding your hard drive** and disposing of it within the correct recycling streams.

Regulatory compliances such as [HIPAA](#) not only apply to hard copy records. They also apply to any media, such as CD's, DVD's, backup tape and hard drives, that may contain confidential information. For this reason alone, your records management retention schedule should not only take paper documents into account but should also include media such as desktop, back up tapes etc...

Like hard copy paper records, media that contains confidential client information should be [securely destroyed](#) using the proper method. Our **Hard drive destruction** is the only completely secure way to destroy the data. Our [media destruction](#) services ensure that your media is destroyed using the appropriate procedures.

Our [media destruction](#) services eliminate the risk that your data will be stolen and protects your company from compliance violations. Once your media is destroyed, you will be given a Notarized Certificate of Destruction.
